## Executive Summary Report

Automated load test report and summary for test Smoke Test in organization ghiathchaal.beg@gmail.com

# EXECUTIVE SUMMARY - Smoke Test

✓ PASS

Status: **PASS**  
 Created: 24 Apr 2022 at 13:33  
 Started by: ghiathchaal.beg@gmail.com  
 VUs: 1VUs  
 Duration: 12 min 30 sec  
 Load zones:

Max Throughput  
1 reqs/s

HTTP Failures  
0 reqs

Avg Response Time  
41 ms

95% Response Time  
83 ms

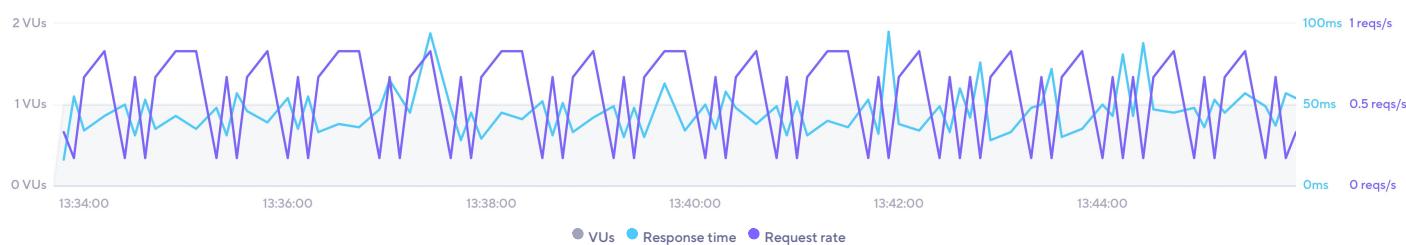

## SUMMARY

This report summarizes a test run of the test "Smoke Test". It was performed on April 24, 2022 and is considered to be successful.

The test was configured to run up to **1VUs** for 12 minutes 30 seconds. A total of **265 requests** were made with a max throughput of **0.83 reqs/s**. The sections below give a more detailed breakdown.

## PERFORMANCE OVERVIEW

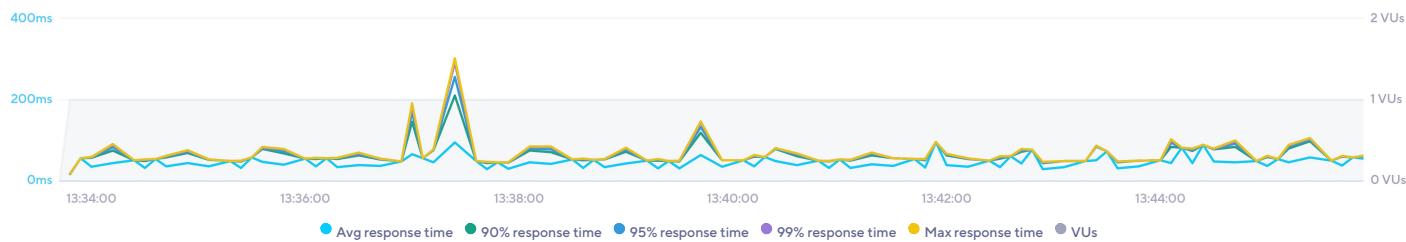

The average response time of the system being tested was **42 ms** and **265 requests** were made at an average request rate of **0 requests per second**.

## TEST OVERVIEW

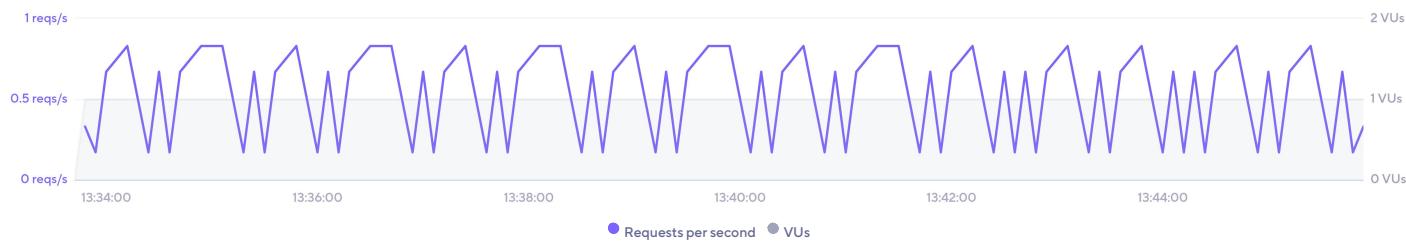

### RESPONSE TIME

The maximum response time was **302 ms** at **1VUs**. The average response time at the same point in time was **94 ms**, with 95% of requests taking less than **256 ms**.

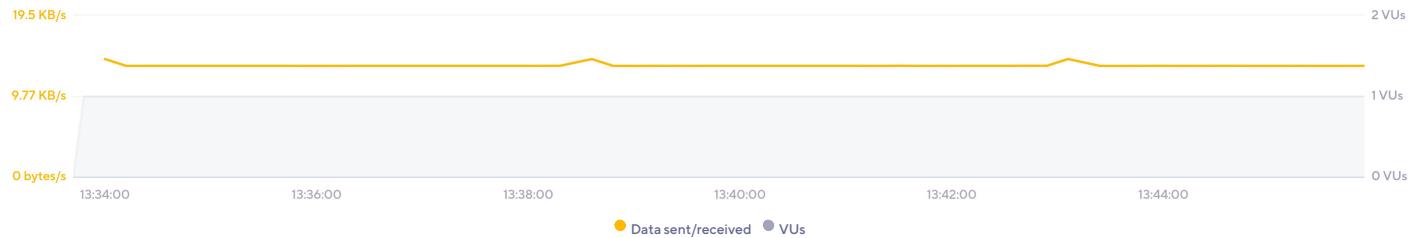

## THROUGHPUT

The test had an overall average request rate of **0.36 reqs/s** peaking at **0.83 reqs/s** while running **1VUs**.

## BANDWIDTH

The amount of data sent peaked at **1VUs**, sending **461 bytes/s** of data. Data received had its peak at **1VUs** with **13.8 KB/s** being received.

## SLOWEST REQUESTS

There were requests to **3** unique URLs, with **3** different responses received. The slowest response had an average response time of **59 ms**.

URL	METHOD	STATUS	COUNT	MIN	Avg	95%	99%	MAX
<a href="https://irischat.me/account/2/">https://irischat.me/account/2/</a>	GET	200	159	37 ms	59 ms	89 ms	165 ms	302 ms
<a href="https://irischat.me/login/?next=%2Fchat%2F%3Froom_id%3DN">https://irischat.me/login/?next=%2Fchat%2F%3Froom_id%3DN</a>	GET	200	53	15 ms	19 ms	23 ms	25 ms	26 ms
<a href="https://irischat.me/chat/">https://irischat.me/chat/</a>	GET	302	53	12 ms	13 ms	14 ms	14 ms	15 ms

# VOCABULARY

## VUs

A Virtual User is a simulation of a real user making requests to the system. Multiple VUs are executed concurrently to simulate traffic to the website or API.

## Throughput

The amount of transactions the system under test can process, showing the capacity of the website or application.

## Checks

A check is an assertion that the system under test behaves correctly, e.g. that it returns the correct status code. They do not halt the execution of the test, but acts as a pass/fail metric.

## Response Time

The time from sending the request, processing it on the server side, to the time the client received the first byte.

## Latency

The time that data sent or received spends on the wire, i.e. from the start of data being transmitted until all the data has been sent.

## Thresholds

Thresholds are a pass/fail criteria used to specify the performance expectations of the system under test.

## ABOUT k6 CLOUD

k6 helps engineering teams prevent system failures and quickly deliver best-of-class applications. Our cutting-edge load testing platform brings cross-functional teams together to prevent reliability and scalability issues so that every application performs well. Developers, operations, and QA teams use our tools to automate testing and test earlier in the development process to bring high-quality products to market faster.

For more than 20 years, we have consulted businesses about load testing. We have spent the past 12 years developing state-of-the-art load and performance testing tools. 6,000+ customers—including Grafana, Microsoft, Carvana, and Olo—run millions of k6 tests every month. For more information, visit <https://k6.io>.
