 Started by: ghiathchaal.beg@gmail.com
 VUs: **50 VUs**
 Duration: 12 min 30 sec
 Load zones:

 Max Throughput
12 reqs/s

 HTTP Failures
0 reqs

 Avg Response Time
118 ms

 95% Response Time
192 ms

SUMMARY

This report summarizes a test run of the test "Soak Test". It was performed on April 24, 2022 and is considered to be successful.

The test was configured to run up to **50 VUs** for 12 minutes 30 seconds. A total of **7 539 requests** were made with a max throughput of **12 reqs/s**. The sections below give a more detailed breakdown.

PERFORMANCE OVERVIEW

The average response time of the system being tested was **118 ms** and **7 539 requests** were made at an average request rate of **10 requests per second**.

TEST OVERVIEW

RESPONSE TIME

The maximum response time was **253 ms** at **50 VUs**. The average response time at the same point in time was **125 ms**, with 95% of requests taking less than **195 ms**.

THROUGHPUT

The test had an overall average request rate of **10 reqs/s** peaking at **12 reqs/s** while running **50 VUs**.

BANDWIDTH

The amount of data sent peaked at **50 VUs**, sending **5.91 KB/s** of data. Data received had its peak at **50 VUs** with **115 KB/s** being received.

SLOWEST REQUESTS

There were requests to **3** unique URLs, with **3** different responses received. The slowest response had an average response time of **188 ms**.

URL	METHOD	STATUS	COUNT	MIN	Avg	95%	99%	MAX
https://irischat.me/account/1/	GET	200	2513	178 ms	188 ms	201 ms	219 ms	253 ms
https://irischat.me/login/?next=%2Fchat%2F%3Froom_id%3DN	GET	200	2513	81 ms	86 ms	94 ms	101 ms	116 ms
https://irischat.me/chat/	GET	302	2513	78 ms	81 ms	83 ms	84 ms	107 ms

VOCABULARY

VUs

A Virtual User is a simulation of a real user making requests to the system. Multiple VUs are executed concurrently to simulate traffic to the website or API.

Throughput

The amount of transactions the system under test can process, showing the capacity of the website or application.

Checks

A check is an assertion that the system under test behaves correctly, e.g. that it returns the correct status code. They do not halt the execution of the test, but acts as a pass/fail metric.

Response Time

The time from sending the request, processing it on the server side, to the time the client received the first byte.

Latency

The time that data sent or received spends on the wire, i.e. from the start of data being transmitted until all the data has been sent.

Thresholds

Thresholds are a pass/fail criteria used to specify the performance expectations of the system under test.

ABOUT k6 CLOUD

k6 helps engineering teams prevent system failures and quickly deliver best-of-class applications. Our cutting-edge load testing platform brings cross-functional teams together to prevent reliability and scalability issues so that every application performs well. Developers, operations, and QA teams use our tools to automate testing and test earlier in the development process to bring high-quality products to market faster.

For more than 20 years, we have consulted businesses about load testing. We have spent the past 12 years developing state-of-the-art load and performance testing tools. 6,000+ customers—including Grafana, Microsoft, Carvana, and Olo—run millions of k6 tests every month. For more information, visit <https://k6.io>.
